A.S.I.

Artificial Superior Intelligence Paradigm

ChatGPT & Bard doesn't understand us, Wiply does!

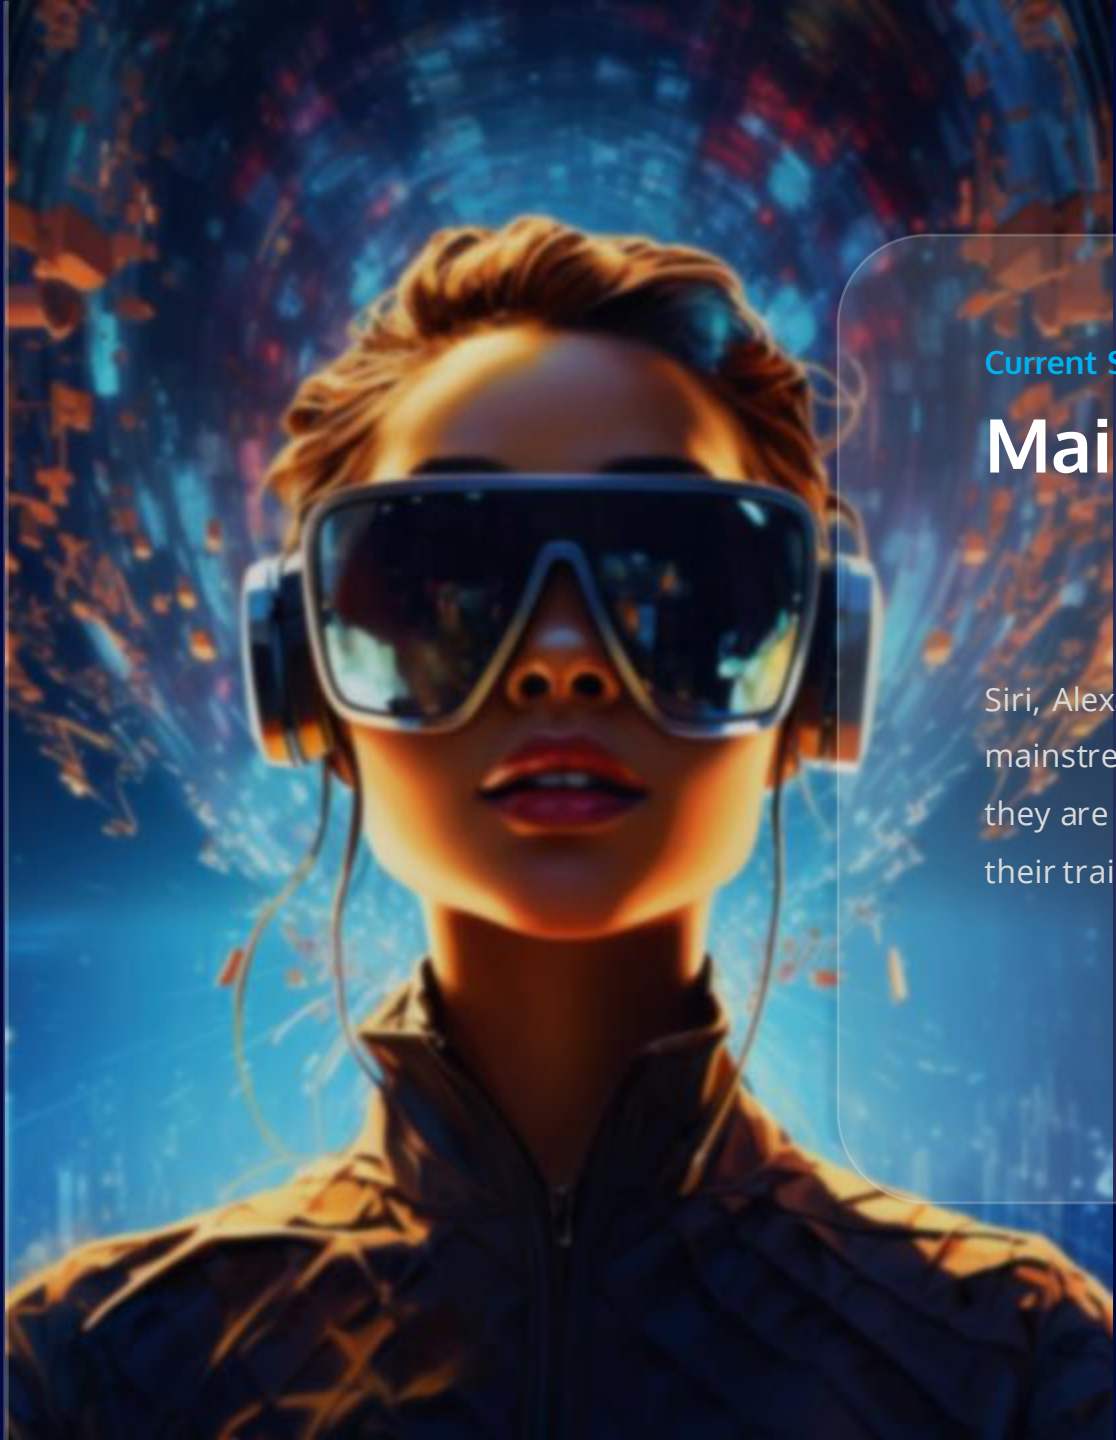

Discover →

//

We call it '**Artificial intelligence**', but a better name might be 'extracting statistical patterns from large data sets.'

Alison Gopnik

Berkley Professor

Current State ———

Mainstream **A.I.**

Siri, Alexa, ChatGPT, Bard, Dall-e and all other A.I. novelties that went mainstream are only a convincing illusion of Artificial Intelligence as they are basically parroting word arrangements statistically prevalent in their training datasets.

About Us

Wiply is Different

Innovative Machine Learning

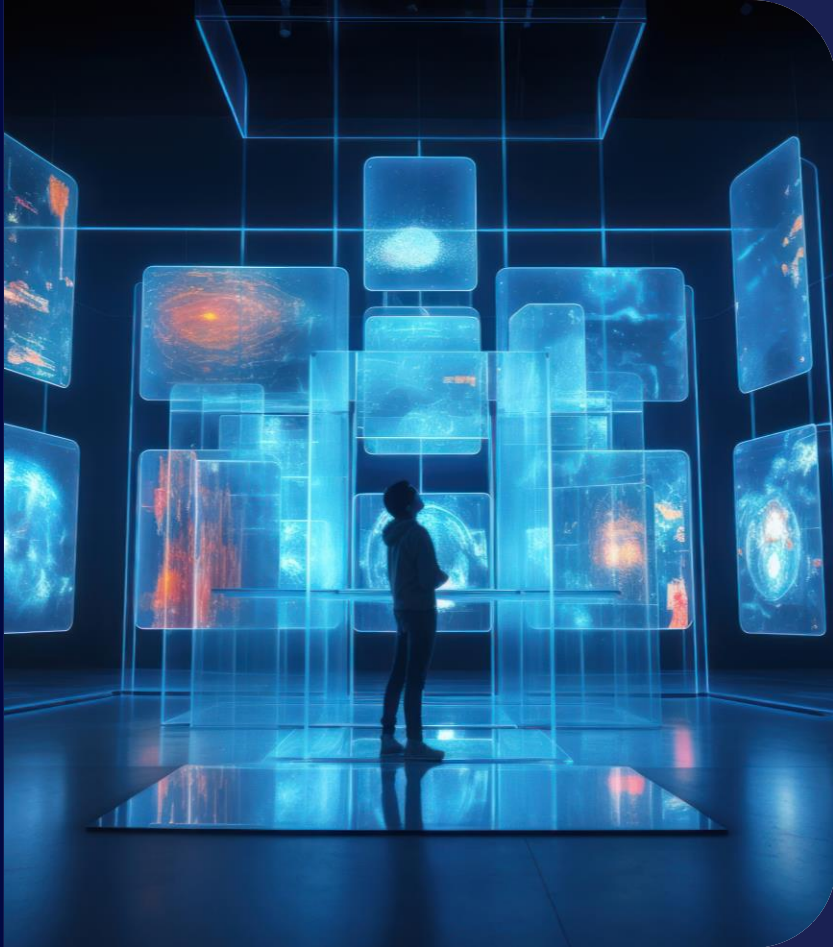

Our solution presents a breakthrough in A.I. Machine Learning Language Comprehension & Cognitive Learning.

New Paradigms of Deep Learning

A first level A.I. Sentient and Self-Learning with Adaptative Cognition System

About Us

Why are we Better?

- ✓ Novel approach to programming the **Deep Machine Learning** protocols, which were designed in collaboration with a team of psychologists specializing in the technique of psychology imagining
- ✓ The Deep Machine Learning is created following new paradigms about to layer solutions emulating brain neuronal behaviour.
- ✓ Innovative procedure in psychologist sciences.

About Us

Why are we Better?

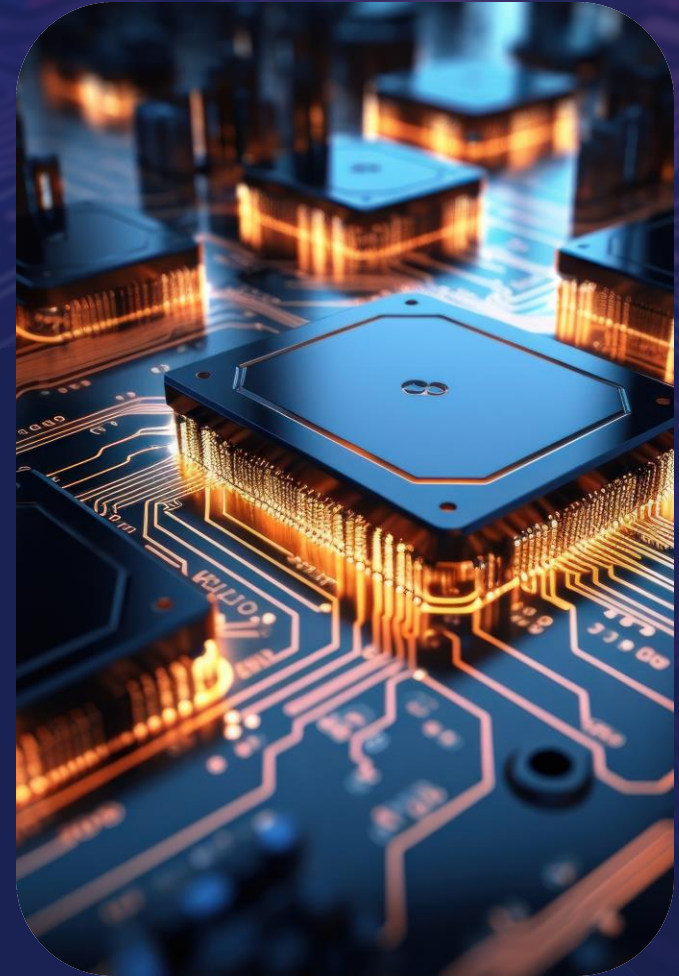

Unlike mainstream AI models our AI is based on layers.

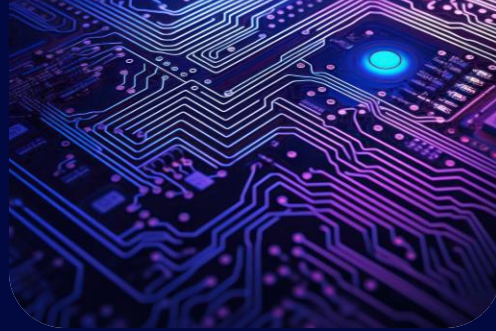

First is the Cognitive Core, a model of knowledge itself.

On top of that, a model of the common-sense world of sufficient scope to understand language and the everyday world.

Finally, depending on the Wiply's application, layers of technical and expert knowledge curated from some of the best human minds and collected works.

No need for lengthy training cycles on datasets.

About Us

Why NOW?

- ✓ Availability of Quantum Computing Systems
- ✓ Advances in Psychological Sciences
- ✓ Abundance of available Big Data
- ✓ Advances in Computer Vision
- ✓ Possibility to combine Computer Vision and Natural Language Processing
- ✓ Market is ready for solutions even more advanced than ChatGPT4

Why Us —————

Our Traction

- ✓ Validation and approval of the Wiply's concept by the academic & scientific community and interest from EIT-Digital & NVIDIA
- ✓ Creation of new protocols (data encryption, TCP/IP system, data transfer bridges, neural network)
- ✓ Methodology ready
- ✓ Core team formed
- ✓ Strong support and interest from academia
- ✓ The protocols to be developed and the necessary hardware have already been individuated and we have begun to work on them.

Our Amazing Team

C.E.O. / Founder

Piero Musu

Studies in A.I at University of Cagliari; 15+ years of research on Metaverse, AR and A.I. Expert in AWS technologies, Cybersecurity, Machine Learning and Artificial Intelligence, Data Analysis

C.T.O.

Burt Ratti

Expert programmer in Python, Java, PHP, Fortran and much more with a wide experience in SaaS Software development.

C.B.O.

Laura Calchera

Major in Psychology at Università Cusano, BBA at University Bocconi of Milan, expert in the Imaginative Procedure a new psychology branch.
